MITRE ATLAS | AML.T0024.000 - Infer Training Data Membership

Entry Information

ID:
AML.T0024.000

Type:
Sub-Technique

Name:
Infer Training Data Membership

URL:
https://atlas.mitre.org/techniques/AML/T0024/000/

Parent Technique:
AML.T0024

Maturity:
Feasible

Created:
2021-05-13

Modified:
2025-11-06

Description

Adversaries may infer the membership of a data sample or global characteristics of the data in its training set, which raises privacy concerns.

Some strategies make use of a shadow model that could be obtained via [Train Proxy via Replication](/techniques/AML.T0005.001), others use statistics of model prediction scores.

This can cause the victim model to leak private information, such as PII of those in the training set or other forms of protected IP.
