MITRE ATLAS | AML.T0024.001 - Invert AI Model

Entry Information

ID:
AML.T0024.001

Type:
Sub-Technique

Name:
Invert AI Model

URL:
https://atlas.mitre.org/techniques/AML/T0024/001/

Parent Technique:
AML.T0024

Maturity:
Feasible

Created:
2021-05-13

Modified:
2025-04-09

Description

AI models' training data could be reconstructed by exploiting the confidence scores that are available via an inference API.

By querying the inference API strategically, adversaries can back out potentially private information embedded within the training data.

This could lead to privacy violations if the attacker can reconstruct the data of sensitive features used in the algorithm.
