Modified:
2025-04-09

Description

The adversary is trying to run malicious code embedded in AI artifacts or software.

Execution consists of techniques that result in adversary-controlled code running on a local or remote system.
Techniques that run malicious code are often paired with techniques from all other tactics to achieve broader goals, like exploring a network or stealing data.
For example, an adversary might use a remote access tool to run a PowerShell script that does [Remote System Discovery](https://attack.mitre.org/techniques/T1018/).
