# MITRE ATLAS | AML.T0066 - Retrieval Content Crafting

## Entry Information

**ID:**
AML.T0066

**Type:**
Technique

**Name:**
Retrieval Content Crafting

**URL:**
https://atlas.mitre.org/techniques/AML/T0066/

**Tactics:**
AML.TA0003

**Maturity:**
Demonstrated

**Created:**
2025-03-12

**Modified:**
2025-03-12

## Description

Adversaries may write content designed to be retrieved by user queries and influence a user of the system in some way. This abuses the trust the user has in the system.

The crafted content can be combined with a prompt injection. It can also stand alone in a separate document or email. The adversary must get the crafted content into the victim\u0027s database, such as a vector database used in a retrieval augmented generation (RAG) system. This may be accomplished via cyber access, or by abusing the ingestion mechanisms common in RAG systems (see [RAG Poisoning](/techniques/AML.T0070)).

Large language models may be used as an assistant to aid an adversary in crafting content.
