MITRE ATLAS | AML.T0102 - Generate Malicious Commands

Entry Information

ID:
AML.T0102

Type:
Technique

Name:
Generate Malicious Commands

URL:
https://atlas.mitre.org/techniques/AML/T0102/

Tactics:
AML.TA0001

Maturity:
Realized

Created:
2025-11-25

Modified:
2025-12-23

Description

Adversaries may use large language models (LLMs) to dynamically generate malicious commands from natural language. Dynamically generated commands may be harder detect as the attack signature is constantly changing. AI-generated commands may also allow adversaries to more rapidly adapt to different environments and adjust their tactics.

Adversaries may utilize LLMs present in the victim's environment or call out to externally hosted services. [APT28](https://attack.mitre.org/groups/G0007) utilized a model hosted on HuggingFace in a campaign with their LAMEHUG malware [\[1\]][1]. In either case prompts to generate malicious code can blend in with normal traffic.
