America's Cyber Defense Agency

NATIONAL COORDINATOR FOR CRITICAL INFRASTRUCTURE SECURITY AND RESILIENCE

Securing Networks

CISA works with government and private sector entities to secure networks through an enterprise approach, enhancing the strength of all networks by sharing information.

Cyber Threats and Advisories

Overview

Securing networks is a preventative measure in the fight against cybercrime and attacks. The federal enterprise depends on information technology (IT) systems and computer networks for essential operations. Keeping networks safe protects the vital information and operational processes that live and depend on these systems. Networks face large and diverse cyber threats that range from unsophisticated hackers to technically competent intruders using state-of-the-art intrusion techniques. Many malicious attacks are designed to steal information and disrupt, deny access to, degrade, or destroy critical information systems. Securing a network involves continuous monitoring, assessments, and mitigation across various interrelated components, including servers, the cloud, Internet of Things (IoT), internet connections and the many physical assets used to access networks.

CISA's Role

CISA works with each federal civilian department and agency to promote the adoption of common policies and best practices that are risk-based and able to effectively respond to the pace of ever-changing threats. When networks are protected, alerts can be issued at machine speed to help protect related or similar networks across the government information technology enterprise and the private sector. CISA provides the coordinating efforts and broad reach needed to create an enterprise approach to securing networks. This enterprise approach transforms the way federal agencies and private sectors manage cyber networks through strategically sourced tools and services that enhance the speed and cost effectiveness of federal cybersecurity procurements and allow consistent application of best practices.

Continuous Diagnostics and Mitigation (CDM) Program </resources-tools/programs/continuous-diagnostics-and-mitigation-cdm-program>

Improve your security posture with CDM program cybersecurity tools, integration services, and dashboards designed to dynamically fortify the cybersecurity of government networks and systems.

Trusted Internet Connections </resources-tools/programs/trusted-internet-connections-tic>

Including new CISA guidance, tips, and use cases, TIC 3.0 reflects modern processes and technological innovations while recognizing the challenges and IT constraints of the federal government and its agencies.

Software Bill of Materials (SBOM) </sbom>

SBOMs are key building blocks in software security and supply chain risk management. Learn how CISA is working to advance the software and security communities' understanding of SBOM creation, use, and implementation.

Secure Cloud Business Applications (SCuBA) Project </resources-tools/services/secure-cloud-business-applications-scuba-project>

The SCuBA project provides guidance and capabilities to secure agencies' cloud business application environments and protect federal information that is created, accessed, shared and stored in those environments.

Training

CISA offers a variety of trainings to help you and your organization secure your networks.

High Value Asset 3.0 (HVA 3.0) Assessment Training </resources-tools/training/high-value-asset-30-hva-30-assessment-training>

CUSTOMIZABLE | VIRTUAL/ONLINE

The High Value Assets (HVA) course is designed to empower students to evaluate the federal government's approach to managing risk and to provide an unbiased, third-party review of the government's most critical HVA's cybersecurity posture and operations.

Services

CISA services offer tailored expertise and guidance based on your organization's needs and requirements.

Account Management </resources-tools/services/account-management>

INCREASE YOUR RESILIENCE

Contact: esslob@hhs.gov

Ensure that a concept of separation of duties is implemented and logical access controls and account lockout/disabling controls are in place.

Foundational

Disaster Recovery Consultation, Documentation, & Testing </resources-tools/services/disaster-recovery-consultation-documentation-testing>

INCREASE YOUR RESILIENCE

Contact: iss_services@esc.gov

Obtain a customized contingency plan tailored for the unique needs and a structure of specific systems built in accordance with NIST 800-37 and 800-53.

Foundational

Creation/Maintenance of Security Documentation and/or Procedures </resources-tools/services/creationmaintenance-security-documentation-andor-procedures>

OTHER

Contact: esc-cyberservices@faa.gov

Create, update, and consult on information protection processes and procedures to develop the required documentation for a new or continuously monitored system needed for a security control assessment.

Foundational

Resources, Tools, and Publications

CISA offers guides, tools, and other resources to support network security.

Secure by Design Alert: Eliminating Buffer Overflow Vulnerabilities </resources-tools/resources/secure-design-alert-eliminating-buffer-overflow-vulnerabilities>

FEB 12, 2025 | FACT SHEET, PUBLICATION

This Secure by Design Alert is part of an ongoing series aimed at advancing industry-wide best practices to eliminate entire classes of vulnerabilities during the design and development phases of the product lifecycle.
