Indrasena Kalyanam

Software Engineer

indrasenakalyanam@gmail.com
+1 (414) 732-7764

Education

- **University of Wisconsin–Milwaukee** — Milwaukee, WI
  MS in Computer Science, GPA: 3.87/4.0 — *Aug 2023 – May 2025*
- **Visvesvaraya Technological University** — Bangalore, India
  BE in Computer Science, GPA: 8.72/10 — *Aug 2017 – Aug 2021*

Technical Skills

- **Backend:** C#, .NET Core, Python, RESTful APIs, SQL.
- **Frontend:** JavaScript, React.js, Angular, Razor, KendoUI, Telerik.
- **Cloud & DevOps:** Azure, Azure App Service, Azure Functions, CI/CD, DevOps, Agile, Git.
- **Databases & Tools:** MS SQL Server, Redis, SQL, Docker, Entity Framework, Swagger, NuGet.
- **Preferred:** Predictive Models, Financial Models, Machine Learning, Data Science.

Experience

- **University of Wisconsin–Milwaukee** — Milwaukee, WI
  Technical Consultant — *Jul 2025 – Present*
  - Developed and deployed a multi-agent AI system on a cloud-based ecosystem for automating service deployment.
  - Built a multi-agent chatbot capable of parsing files using **Microsoft Azure** services and integrated it with a front end.
  - Designed and developed the chatbot's front end using Angular, ensuring a seamless user experience.
- **University of Wisconsin–Milwaukee** — Milwaukee, WI
  Graduate Research & Teaching Assistant — *Aug 2024 – May 2025*
  - Deployed a scalable machine learning application on Azure using **Docker** and **Azure Functions** for a CI/CD pipeline.
  - Researched and integrated predictive models into a multi-agent system for predictive model integration into applications.
  - Built a web application with a Linux terminal to teach cybersecurity concepts, demonstrating full-stack development skills.
  - Assisted in teaching Java programming, object-oriented design, and cybersecurity to over 100 students.
- **Integra Connect** — Bangalore, India
  Software Engineer – C#/.NET Developer — *May 2021 – Aug 2023*
  - Migrated a monolithic healthcare system to a scalable Azure microservices arch using **C#**, **.NET Core**, and **SQL Server**.
  - Engineered and deployed cloud-based **RESTful APIs** with **C#** and **SQL Server** to enhance secure patient data access.
  - Optimized data processing by building automated **Azure Functions** and **Logic Apps** for CCDA pipeline generation.
  - Developed and maintained dynamic data access dashboards using **KendoUI**, **Telerik**, and **JavaScript** with **ASP.NET**.
  - Enhanced system performance by 40% by architecting **Redis** caching and tuning **SQL** stored procedures and queries.
  - Used **Entity Framework Core** for ORM to manage complex data interactions, ensuring data integrity and consistency.
  - Ensured **HIPAA compliance** by implementing security fixes and resolving over 30 issues identified by SAST/DAST scans.
  - Monitored prod env performance using Dynatrace and Solar Winds, ensuring system reliability and quick issue resolution.
  - Led a 4-member team to build scalable healthcare data services, delivering production-ready features within Agile sprints.
  - Utilized **Git** and **CI/CD pipelines** to manage code and continuously deliver software value to clients in an **Agile** env.
- **XON Labs** — Bangalore, India
  Software Dev Intern — *Oct 2020 – Nov 2020*
  - Designed a sentiment analysis web application that classifies tweets and generates movie reviews.
  - Delivered a functional prototype within four weeks, improving analysis speed by 35% over baseline methods.
- **Prinston Smart Engineers** — Bangalore, India
  Full Stack Web Dev Intern — *May 2020 – Jul 2020*
  - Led a 4-member team to develop a full-stack web application for doorstep home service bookings.
  - Designed customer, provider, and admin modules with features like real-time updates and service tracking.

Projects

- **Azure Microservices:** Engineered a distributed system with **.NET Core** Web API microservices, configuring Swagger and **Entity Framework Core**. **Technical Skills: .NET** Web API, **C#**, Docker, **Microservices**, **Azure**, **RESTful API**.
- **Expenses:** A full-stack web application for managing personal expenses using **.NET** Web API and C# with Angular. **Technical Skills: .NET** Web API, **C#**, MySQL, Angular, **TypeScript**, JWT, RESTful API.
- **Cloud-Native Application Development:** A cloud-native ML application using **Azure Kubernetes Service** and **Azure Functions** for scalable model deployment. **Technical Skills:** ML, **Azure**, **AKS**, **Serverless Computing**, **Docker**.
- **MedReach – Offline-Capable EHR System:** Developed a web application for patient record management with offline syncing. **Technical Skills:** React.js, Firebase, IndexedDB.
- **Transformer-based Network Anomaly Detection:** Built a machine learning model using the Transformer architecture to detect network anomalies with high accuracy. **Technical Skills:** Python, PyTorch, Pandas, Transformer Architecture.

Achievements & Leadership

- Clinched first place at the Agentic AI Hackathon by building a multi-agent LLM-powered **AI** system.
- Received a shout-out from leadership for delivering exceptional work in a high-impact healthcare software environment.
- Runner-up in Fortinet's Cybersecurity Attack & Defend Challenge, simulating advanced threat scenarios.
- Awarded the Outstanding Student Award by Professor Zhen Zeng for impactful research assistant work.
- Served as Class Representative and successfully coordinated numerous campus-wide and interdisciplinary events.
